

Parent FAQs (Frequently Asked Questions)

What is PARCC?

The Partnership for Assessment of Readiness for College and Careers (PARCC) is a group of states working together to develop high-quality assessments that give teachers, students and parents information they can use to improve instruction and meet the needs of individual students. The PARCC assessments are well aligned with what students are expected to know and be able to do at each grade level and they serve students who are academically advanced, on grade level, and struggling by identifying where they have areas of need, as well as where they are excelling.

What subjects and grades are tested on the PARCC assessments?

Rhode Island administers the PARCC assessments in grades 3-9 in ELA/Literacy and grades 3-8 in Mathematics. Algebra I, Algebra II, and Geometry assessments are available for middle or high school students enrolled in those courses.

What types of accommodations are allowed for students with disabilities?

There are several ways in which PARCC is made accessible for student with disabilities. First, PARCC uses universal design principles that guide the construction of the assessments and test questions in ways that make them easily understood for all students. Second, because PARCC is a computer-based test, we have many more options for which accommodations to offer. These accommodations can now incorporate assistive technology devices and include embedded American Sign Language videos and closed captioning for students with hearing impairments. Third, PARCC allows accessibility features (similar to universal design components) that support instructional strategies like highlighting important evidence in reading passages, providing glossaries of words, and allowing the mathematics assessments to be read aloud if a student has difficulty reading. Having accommodations or using accessibility features does not impact a student's score in any way.

Why are the PARCC results important?

PARCC assessments benefit students, parents, schools, and states because they provide us with information that helps us document student progress toward our learning goals in English language arts and math. We all want the best possible education for all of our children. Analyzing the results of state assessments can help us meet this goal. Results provide parents with valuable information about their student's and school's progress and provide school leaders with information that contributes to their understanding about whether classroom instruction is lining up with what students need to know. Results also provide teachers with information they need to improve teaching and learning. Participation in high-quality annual assessments enables all of us to see whether schools and districts are doing all they can to help students succeed.

Parents and students deserve to know to what extent schools are meeting students' needs and where schools need to improve.

When will PARCC results be sent to parents?

PARCC's goal is to have results returned before the start of the next school year. Parents should expect to receive student reports in late August.

Who is scoring the PARCC assessment and what are their credentials?

PARCC states partner with our testing company, Pearson, which recruits and trains qualified scorers at the national and local levels. Applicants complete a rigorous and selective evaluation, hiring and training process to qualify as PARCC scorers. Accuracy and consistency of scoring is monitored throughout the scoring process. Only applicants who have a Bachelor's degree or higher in mathematics, English, education or a related field may be hired to score PARCC assessments. Not all scorers are teachers, but most have previous teaching experience and half are *current* K-12 teachers.

Will PARCC results affect my child's grades?

The scores and achievement levels students attain on the PARCC assessments can be used to measure progress going forward. Schools and districts may decide to use PARCC results as one component in determining students' grades. For example, schools could choose to use PARCC results from the Algebra I or Geometry assessments as their end-of-course assessment. The use of PARCC results is a decision that schools, districts, or school committees will make at the local level.

Will schools or school districts use PARCC as a graduation requirement?

RIDE will not use PARCC assessments as a statewide component of our Diploma System until the Class of 2020, although local school districts may decide to use PARCC assessments as a graduation requirement beginning with the Class of 2017.
