Release of Spring 2021
RICAS Test Items

from the

Grade 3 Mathematics
Paper-Based Test

June 2021
Rhode Island Department of Education
Overview of Grade 3 Mathematics Test

The spring 2021 grade 3 Mathematics test was a next-generation assessment that was administered in two primary formats: a computer-based version and a paper-based version. The vast majority of students took the computer-based test. The paper-based test was offered as an accommodation for students with disabilities who are unable to use a computer, as well as for English learners who are new to the country and are unfamiliar with technology.

Most of the operational items on the grade 3 Mathematics test were the same, regardless of whether a student took the computer-based version or the paper-based version. In places where a technology-enhanced item was used on the computer-based test, an adapted version of the item was created for use on the paper test. These adapted paper items were multiple-choice, multiple-select, or short-answer items that tested the same Mathematics content and assessed the same standard as the technology-enhanced item.

This document displays released items from the paper-based test. Released items from the computer-based test are available on the RICAS Resource Center website at ricas.pearsonsupport.com/released-items.

The Scoring Guides can be found at www.doe.mass.edu/mcas/student/. They provide the released constructed-response questions, a unique scoring guide for each question, and samples of student work at each score point.

Test Sessions and Content Overview

The grade 3 Mathematics test was made up of two separate test sessions. Each session included selected-response, short-answer, and constructed-response questions. On the paper-based test, the selected-response questions were multiple-choice items and multiple-select items, in which students select the correct answer(s) from among several answer options.

Standards and Reporting Categories

The grade 3 Mathematics test was based on standards in the five domains for grade 3 in the Massachusetts Curriculum Framework for Mathematics (2017). The five domains are listed below.

- Operations and Algebraic Thinking
- Number and Operations in Base Ten
- Number and Operations—Fractions
- Measurement and Data
- Geometry

Mathematics test results are reported under five MCAS reporting categories, which are identical to the five framework domains listed above.

The tables at the conclusion of this document provide the following information about each released and unreleased operational item: reporting category, standard(s) covered, item type, and item description. The correct answers for released selected-response and short-answer questions are also displayed in the released item table.

Reference Materials and Tools

Each student taking the paper-based version of the grade 3 Mathematics test was provided with a plastic ruler. An image of the ruler is not reproduced in this document.

During both Mathematics test sessions, the use of bilingual word-to-word dictionaries was allowed for current and former English learner students only. No calculators, other reference tools, or materials were allowed.
Grade 3 Mathematics
SESSION 1

This session contains 14 questions.

You may not use a calculator during this session.

Directions
Read each question carefully and then answer it as well as you can. You must record all answers in this Test & Answer Booklet.

For some questions, you will mark your answers by filling in the circles in your Test & Answer Booklet. Make sure you darken the circles completely. Do not make any marks outside of the circles. If you need to change an answer, be sure to erase your first answer completely.

For other questions, you will need to fill in an answer grid. Directions for completing questions with answer grids are provided on the next page.

If a question asks you to show or explain your work, you must do so to receive full credit. Write your response in the space provided. Only responses written within the provided space will be scored.
Directions for Completing Questions with Answer Grids

1. Work the question and find an answer.
2. Enter your answer in the answer boxes at the top of the answer grid.
3. Print only one number or symbol in each box. Do not leave a blank box in the middle of an answer.
4. Under each answer box, fill in the circle that matches the number or symbol you wrote above. Make a solid mark that completely fills the circle.
5. Do not fill in a circle under an unused answer box.
6. If you need to change an answer, be sure to erase your first answer completely.
7. See below for examples of how to correctly complete an answer grid.

EXAMPLES
1. What is the missing number that makes this equation true?

\[ 8 \times ? = 48 \]

A. 6  
B. 7  
C. 40  
D. 56

2. Which of these shows \( \frac{7}{8} \) of the fraction model shaded?

A.  
B.  
C.  
D.  

In which pair of equations are both equations true?

A. \(7 \div 1 = 7\)
   \(1 \div 7 = 7\)

B. \(1 \div 7 = 7\)
   \(1 \times 7 = 7\)

C. \(7 \times 1 = 7\)
   \(1 \div 7 = 7\)

D. \(7 \times 1 = 7\)
   \(7 \div 1 = 7\)
A dog owner gave his dog the same number of treats each day for 4 days. Over the 4 days, he gave his dog a total of 12 treats.

Which expression can be used to find the number of treats the dog owner gave his dog each day?

A. 12 − 4
B. 12 + 4
C. 12 ÷ 4
D. 12 × 4
5. Which of these shapes appear to be rhombuses?
Select the two correct answers.

A  

B  

C  

D  

E  

6. This circle is divided into equal parts.

What fraction of the area of the whole circle is one part?

A \[ \frac{1}{1} \]  

B \[ \frac{6}{1} \]  

C \[ \frac{1}{6} \]  

D \[ \frac{6}{6} \]
This question has two parts.

A child spent time doing three activities after school.

- He spent 30 minutes doing homework.
- He spent 45 minutes doing chores.
- He spent 1 hour and 15 minutes playing outside.

Part A

How many more minutes did the child spend doing chores than doing homework? Show or explain how you got your answer.

Enter your answer and your work or explanation in the space provided.
Part B

What is the total number of minutes the child spent doing all three activities? Show or explain how you got your answer.

Enter your answer and your work or explanation in the space provided.
Use your ruler to answer question 8.

What is the length, to the nearest fourth of an inch, of this pencil?

A  $4\frac{3}{4}$ inches

B  $4\frac{1}{2}$ inches

C  $4\frac{1}{4}$ inches

D  4 inches
People rode in four wagons during a hayride. This bar graph shows the number of people who were in each wagon.

The total number of people in wagons 1 and 4 was how much greater than the number in wagon 2?

Enter your answer in the answer boxes at the top of the answer grid and completely fill the matching circles.
This question has three parts.

10 A store owner recorded the amount of money, in dollars, he earned on each of three days, as shown in this table.

<table>
<thead>
<tr>
<th>Day</th>
<th>Monday</th>
<th>Tuesday</th>
<th>Wednesday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount (dollars)</td>
<td>153</td>
<td>116</td>
<td>88</td>
</tr>
</tbody>
</table>

Part A

The store owner rounded the amount of money, in dollars, he earned on each day to the nearest hundred.

What is each amount in the table rounded to the nearest hundred?

Enter your answers in the space provided.
Part B

The store owner estimated the total amount of money, in dollars, he earned over the three days. He did this by first rounding the amount he earned each day to the nearest ten and then finding the total.

What was the owner’s estimate of the total amount of money, in dollars, he earned over the three days? Show or explain how you got your estimate.

Enter your estimate and your work or explanation in the space provided.
Part C

On Thursday, the store owner rounded the amount of money, in dollars, he earned that day to the nearest ten and got 60.

What is the greatest amount of money, in dollars, the owner could have earned on Thursday? Explain how you got your answer.

Enter your answer and your explanation in the space provided.
Janette had 32 pencils to share with 4 friends. She gave each friend the same number of pencils.

What is the total number of pencils Janette gave each friend?

A  36
B  28
C  8
D  7
A student folded 2 sheets of paper along dotted lines, as shown.

Which of these fractions also shows how many sheets of paper the student folded?

A \( \frac{16}{8} \)

B \( \frac{16}{2} \)

C \( \frac{8}{8} \)

D \( \frac{8}{2} \)
A group of 12 friends are going skating. Some of the friends will rent skates.

- 5 of the friends will **not** rent skates.
- The remaining friends will each rent skates for $3.00.

Which of these number lines shows a point that represents the total amount, in dollars, the group will pay to rent skates?
The floor of a room is covered with square tiles, with no gaps or overlaps. Each square tile has a side length of 1 meter, as shown in this diagram.

What is the area, in square meters, of the floor of the room?

Enter your answer in the answer boxes at the top of the answer grid and completely fill the matching circles.
Grade 3 Mathematics
SESSION 2

This session contains 6 questions.

You may not use a calculator during this session.

Directions
Read each question carefully and then answer it as well as you can. You must record all answers in this Test & Answer Booklet.

For some questions, you will mark your answers by filling in the circles in your Test & Answer Booklet. Make sure you darken the circles completely. Do not make any marks outside of the circles. If you need to change an answer, be sure to erase your first answer completely.

For other questions, you will need to fill in an answer grid. Directions for completing questions with answer grids are provided on the next page.

If a question asks you to show or explain your work, you must do so to receive full credit. Write your response in the space provided. Only responses written within the provided space will be scored.
Directions for Completing Questions with Answer Grids

1. Work the question and find an answer.
2. Enter your answer in the answer boxes at the top of the answer grid.
3. Print only one number or symbol in each box. Do not leave a blank box in the middle of an answer.
4. Under each answer box, fill in the circle that matches the number or symbol you wrote above. Make a solid mark that completely fills the circle.
5. Do not fill in a circle under an unused answer box.
6. If you need to change an answer, be sure to erase your first answer completely.
7. See below for examples of how to correctly complete an answer grid.

EXAMPLES
Which of these number lines shows a point that represents the location of $\frac{10}{6}$?
A library card is in the shape of a rectangle. The library card and its side lengths are shown.

Which number sentence can be used to find the area, in square centimeters, of the library card?

A) $5 + 8 = \square$
B) $5 \times 8 = \square$
C) $5 + 8 + 5 + 8 = \square$
D) $5 \times 8 \times 5 \times 8 = \square$
17. Which sentence correctly compares the fractions $\frac{2}{8}$ and $\frac{2}{4}$?

A. The fraction $\frac{2}{8}$ is equal to $\frac{2}{4}$ because both fractions have the same numerator.

B. The fraction $\frac{2}{4}$ is equal to $\frac{2}{8}$ because both fractions are equivalent to the fraction $\frac{1}{2}$.

C. The fraction $\frac{2}{8}$ is greater than $\frac{2}{4}$ because both fractions have the same numerator, and eighths are larger than fourths.

D. The fraction $\frac{2}{4}$ is greater than $\frac{2}{8}$ because both fractions have the same numerator, and fourths are larger than eighths.
A division equation is shown.

\[ 27 \div 3 = m \]

Which of these can also be used to find the value of \( m \)?

A. \( m \div 27 = 3 \)
B. \( 3 \div 27 = m \)
C. \( m \times 3 = 27 \)
D. \( 27 \times 3 = m \)
The first four numbers in a pattern are shown.

39, 43, 47, 51, ?

Which of these sentences are true about the number pattern?

Select the two correct answers.

A  The rule for the pattern is “add 3.”
B  The rule for the pattern is “add 4.”
C  The rule for the pattern is “subtract 6.”
D  The next number in the pattern is 45.
E  The next number in the pattern is 54.
F  The next number in the pattern is 55.
20. An expression is shown.

\[ 5 \times 90 \]

Which of these have the same value as the expression?

Select the two correct answers.

A. \( 5 \times 10 \)
B. \( 9 \times 10 \)
C. \( 90 \times 5 \)
D. \( 5 \times 9 \times 10 \)
E. \( 90 \times 90 \times 90 \times 90 \times 90 \)
