

Envisioning a School Built for the Future

 Pull everything together that you have thought through, learned, and discussed. Use the below frames to help get your vision for your school down on paper.

Step 1

Think back to your goals →

What will be your school's purpose? What parts of the school matter most to you?

Step 2

Reconnect to your communal identities →

How do these goals support the community's values? The community's needs?

Step 3

Remember the student perspective & look to the XQ design principles →

What does an engaging, high-quality learning environment look like in your school?

Step 4

Check back in on the data →

How will you define success for your school and students?

Now turn these ideas into a graphic representation ...

Prompt: How would you visually share your ideas so others can understand and get excited about them?
