Briefing Deck

March 2020
Part I: Early Warning System Purpose & Overview
Part II: Tool Composition
Part III: Interventions
Part IV: Frequently Asked Questions (FAQs)
Part I: Early Warning System Purpose & Overview
Early Warning System (EWS) Purpose

• EWS is a tool designed to help administrators and teachers identify 6th-12th grade students who are at risk of not graduating high school.

• Using a series of indicators, the dashboard provides color-coded risk “bands” to inform a multi-tiered system of support and keep students in school and on track to graduate.

• The dashboard should be used as a starting point for identification of and intervention with at-risk students.
Overview

• Overwhelming academic research suggests attendance, behavior and academic achievement are predictors of high school completion.

• **In partnership with DataSpark and The Policy Lab at Brown University**, RIDE has released a dashboard, complete with a machine-learning algorithm to statistically forecast students most at-risk.

• A public beta will be available statewide through SY19-20; additional updates will be made before the SY20-21.
Overview

• The tool is available to Rhode Island educators and administrators with RIDEmap credentials.
  • District personnel have access to the profiles of all students grades 6-12 within their district.
  • School administrators and teachers will only access the profiles of those students in their school building and classes, respectively.
• National research and best practices around EWSs tells us that course failure is also an important predictor of student on-time graduation. The RIDE data collection to inform the EWS does NOT include course failures and is, therefore, not included in the EWS tool. Schools access the EWS tool should also be observing student course grades as well as local data sources to get more complete data on student risk.
Part II: Tool Composition
The Six Indicators

A student who is at **LOW RISK** will be flagged by the color green. This level of risk signifies that the student has a low risk for the specific indicator.

A student who is at **MEDIUM RISK** will be flagged by the color yellow. This level of risk signifies that the student has a medium risk for the specific indicator.

A student who is at **HIGH RISK** will be flagged by the color red. This level of risk signifies that the student has a high risk for the specific indicator.

- **Attendance Percentage**
  The percentage of days students are present at school in a given school year.

- **ELA State Assessment**
  The proficiency level the student received on the last administration of the ELA State Assessment.

- **Grade Retention**
  The number of times students enroll in the same grade during different school years.

- **Math State Assessment**
  The proficiency level the student received on the last administration of the Math State Assessment.

- **Number of Suspensions**
  The number of suspensions accumulated by students over a school year.

- **At-risk of Dropout**
  The likelihood of students not graduating high school if they stay on their current path.
Student Dashboard - District/School/Teacher Aggregate

936 student(s)

- **Attendance Percentage**: 61.97% Green, 25.64% Yellow, 12.39% Red
- **Grade Retention**: 93.80% Green, 5.98% Yellow
- **Number of Suspensions**: 98.82% Green, 0 Yellow

- **ELA State Assessment**: 37.82% Green, 32.26% Yellow, 22.86% Red
- **Math State Assessment**: 19.87% Green, 47.44% Yellow, 25.64% Red
- **At-risk of Dropout**: 90.92% Green, 2.40% Yellow

Student Dashboard – Filters

Filters along the left column allow for subgroup data analysis, including:

1. School (district view)
2. Classes (teacher view)
3. Grade
4. Gender
5. Race/Ethnicity
6. FRL
7. IEP Status
8. ELL Status
9. All 6 Indicators

Begin to type and choices will appear. Be sure to click the “Apply Filters” button to update the view.
# Individual Student Report

<tbody>
<tr>
<td>The likelihood of students not graduating high school if they stay on their current path. Using student's historical data until the end of the last school year including attendance rates, number of infractions, test scores, retentions, and days in and out of school suspensions, a risk band is assigned using a predictive modeling technique. The algorithm analyzed 23,204 records of all K-12 students in RI between 2004 and 2014 and &quot;learned&quot; patterns about the students who dropped out in an effort to warn educators of the students at risk in the future. This indicator is only available for grades K-12.</td>

Click on “view resources” to see a list of interventions/resources organized by indicator.
Part III: Interventions
Interventions

• Available via the RIDE website
• Linked within the tool for student indicators showing high or medium risk for attendance, retention, suspension, and proficiency. Additional resources provided to support students with IEPs and English Language Learners
• Research-based or Evidence-Based
• Relied heavily on toolkits provided by RIDE departments
• Prioritized easily clickable and/or PDF ready resources

Interventions will continue to evolve as more feedback is provided from the field.
Part IV: Frequently Asked Questions (FAQs)
Frequently Asked Questions (FAQs)

What do I do if I want to look at student risk levels over time?

The individual student reports are exportable. You are able to save the information as a PDF to keep for your records. Keep in mind that the data available in the EWS tool is only the most current data available for students in your school or district. The tool does not keep historical data on students, i.e. what was the Attendance Percentage during the first semester versus the current semester.

How can I find more national research on Early Warning Systems in general?

Research and advocacy institutions like the Everyone Graduates Center at Johns Hopkins University and the Consortium on Chicago School Research (CCSR) have done excellent work in the fields of predicting and preventing high school dropout.
